

Cellular Nanoscale Sensory Wave Computing (Hardback)

Filesize: 1.43 MB

Reviews

This publication is very gripping and intriguing. It is among the most awesome book we have go through. You can expect to like how the author compose this book.

(Dr. Malika Bechtelar II)

CELLULAR NANOSCALE SENSORY WAVE COMPUTING (HARDBACK)

Springer-Verlag New York Inc., United States, 2009. Hardback. Book Condition: New. 246 x 187 mm. Language: English . Brand New Book. This book is loosely based on a Multidisciplinary University Research Initiative (MURI) project and a few supplemental projects sponsored by the Office of Naval Research (ONR) during the time frame of 2004-2009. The initial technical scope and vision of the MURI project was formulated by Drs. Larry Cooper and Joel Davis, both program officers at ONR at the time. The unifying theme of this MURI project and its companion efforts is the concept of cellular nonlinear/neural network (CNN) technology and its various extensions and chip implementations, including nanoscale sensors and the broadening field of cellular wave computing. In recent years, CNN-based vision system drew much attention from vision scientists to device technologists and computer architects. Due to its early implementation in a two-dimensional (2D) topography, it found success in early vision technology applications, such as focal-plane arrays, locally adaptable sensor/processor integration, resulting in extremely high frame rates of 10,000 frames per second. More recently it drew increasing attention from computer architects, due to its intrinsic local interconnect architecture and parallel processing paradigm. As a result, a few spin-off companies have already been successful in bringing cellular wave computing and CNN technology to the market. This book aims to capture some of the recent advances in the field of CNN research and a few select areas of applications.
